This book presents recent and  
upcoming technological  
advancements in millimeter-  
wave (mm-wave), infrared (IR)  
and terahertz (THz) frequency  
spectrums. The scope of this  
book includes a significantly  
long portion of the  
electromagnetic spectrum,  
starting from the mm-waves  
(i.e. 30 GHz) and extended up  
to the end of the near-IR  
spectrum (i.e. 450 THz). Most  
significant aspect of this  
portion of the electromagnetic  
spectrum is that it includes a  
frequency regime where the  
gradual technological  
transition from electronics to  
photonics occurred. The book  
especially focuses on the  
recent advancements and  
several research issues related

to materials, sources, detectors, passive circuits, advanced signal processing and image processing algorithms for mm-wave, IR and THz frequency bands. The book covers a very wide range of readers from basic science to technological experts as well as research scholars.
