The Routledge Handbook on American Prisons is an authoritative volume that provides an overview of the state of U.S. prisons and synthesizes the research on the many functions of the prison system. The United States is exceptional in the world of incarceration as punishment. It not only has the largest

prison population in the world, but also the highest per-
incarceration rate. Research and debate about mass
incarceration continues to grow, with mounting bipartisan
agreement on the need for criminal justice reform. Divided
into four sections (Prisons: Security, Operations and
Administration; Types of Offenders and Populations; Living
and Dying in Prison; and Release, Reentry, and Reform), this
volume explores the key issues fundamental to understanding
the U.S. prison system, including the characteristics of
facilities; inmate risk assessment and classification, prison
administration and employment, for-profit prisons, special
populations, overcrowding, prison health care, prison
violence, the special circumstances of death row prisoners,
collateral consequences of incarceration, prison
programming, and parole. The final section examines reform
efforts and ideas, and offers suggestions for future research
and attention. With contributions from leading correctional
scholars, this book is a valuable resource for scholars with
interest in U.S. prisons and the issues surrounding them.
structured to serve scholars and graduate students studying
corrections, penology, institutional corrections, and other
related topics. A comprehensive guide to effective strategic
management of health care organizations. Strategic
Management of Health Care Organizations provides essential
guidance for leading health care organizations through
strategic management. This structured approach to strategic
management examines the processes of strategic thinking

consensus building and documentation of that thinking in a strategic plan, and creating and maintaining strategic momentum – all essential for coping with the rapidly evolving health care industry. Strategic Management of Health Care Organizations fully explains how strategic managers must become strategic thinkers with the ability to evaluate a changing industry, analyze data, question assumptions, and develop new ideas. The book guides readers through the strategic planning process demonstrating how to incorporate strategic thinking and create and document a clear and coherent plan of action. In addition, the all-important processes of creating and maintaining the strategic momentum of the organization are fully described. Finally, the text demonstrates how strategic managers in carrying out the strategic plan, must evaluate its success, learn more about what works, and incorporate new strategic thinking into operations and subsequent planning. This strategic management approach has become the de facto standard in health care management as leadership and strategic management are more critical than ever in coping with an industry in flux. This book provides health care management students as well as health care administrators with foundational guidance on strategic management concepts and practices, tailored to the unique needs of the health care industry. Included are a clear discussion of health service external analysis, organizational internal analysis, the development of directional strategies, strategy alternatives,

identification and evaluation, and the development and management of implementation strategies providing an informative and insightful resource for anyone in the field. This new eighth edition has been fully updated to reflect insights into strategic thinking, new methods to conceptualize and document critical environmental issues, practical steps for carrying out each of the strategic management processes, industry and management essentials for strategic thinking, and new case studies for applying the strategic management processes. More specifically, readers of this edition will be able to: Create a process for developing a strategic plan for a health care organization. Map and analyze external issues, trends, and events in the general environment, the health care system, and the service area. Conduct a comprehensive service area competitor analysis. Perform an internal analysis and determine the competitive advantages and competitive disadvantages. Develop directional strategies. Identify strategic alternatives and make rational strategic decisions for a health care organization. Develop a comprehensive strategy for a health care organization. Create effective value-added service delivery and support strategies. Translate service delivery and support plans into specific action plans. The health care industry's revolutionary change remains ongoing and organizational success depends on leadership. Strategic management has become the single clearest manifestation of effective leadership of health care organizations and the strategic management framework's strengths are needed.

more than ever. The Strategic Management of Health Care Organizations provides comprehensive guidance and up-to-date practices to help leaders keep their organizations on track. Hemophilia and Von Willebrand Disease: Factor VIII and Von Willebrand Factor serves as a must-have reference on the important role these essential blood-clotting proteins play in research and clinical medicine. Clinicians and researchers face the daily challenge of staying current on vast amounts of research that is now generated. The reference to Janus in the title refers to the two roles of the Factor VIII/Von Willebrand Factor Complex: initiation of coagulation and propagation of clot formation. The complex prevents bleeding in hemophilia and Von Willebrand disease but also augments arterial and venous thrombosis. Presently one source of information on Hemophilia and Von Willebrand Disease, as well as Factor VIII and Von Willebrand Factor, eliminating the search through hundreds of journal articles. Combines the multi-disciplinary research that is generated from Factor VIII/Von Willebrand Factor – hematology, drug discovery, genetics, cell biology, and oncology. Delves into unanswered questions and future directions of this important blood-clotting complex. Written by outstanding authorities from all over the world, this comprehensive new textbook on pediatric and neonatal ventilation puts the focus on the effective delivery of respiratory support to children, infants, and newborns. In the early chapters, developmental issues concerning the respiratory system are considered,

physiological and mechanical principles are introduced and airway management and conventional and alternative ventilation techniques are discussed. Thereafter, the rational use of mechanical ventilation in various pediatric and neonatal pathologies is explained, with the emphasis on a practical step-by-step approach. Respiratory monitoring and safety issues in ventilated patients are considered in detail and many other topics of interest to the bedside clinician are covered, including the ethics of withdrawal of respiratory support and educational issues. Throughout, the text is complemented by numerous illustrations and key information is clearly summarized in tables and lists. The Value Stream Management System simplifies the planning process for implementation, ensuring quick deployment and greater success. It links the metrics and reporting required by management with the lean tools needed on the manufacturing floor. The central feature of this illustrative and engaging book is the value stream management storyboard, a tool representing an eight-step process for lean implementation. The storyboard brings together people, tools, metrics, and reporting into one visual document. The authors stress the importance of reaching beyond single-point kaizens to ensure a sustainable lean implementation process. Many people view the value stream map as an individual tool, but not within the context of a proven overall system. Value Stream Management: Eight Steps to Planning, Mapping, and Sustaining Lean Improvements shows you how to use m

as part of a complete system for lean implementation. The final outcome of Value Stream Management is the creation of a complete, visual plan for lean transformation - and the mastery of the skills required to implement that plan. Instead of just using Toyota Production System Tools, the authors encourage you to create your own lean production system. Value Stream Management will help you to complete your process and sustain it! BONUS CD! Along with this book, you will receive a CD containing a lean assessment tool, a storyboard template, useful charts, a team charter, forms, reports, and worksheets. DVD Package (see Catalog No. PP7338) A training aid to implement those principles taught in the book. A training video is available that teaches managers how to train lean teams. It starts with an overview of value stream management and the basics of lean. Subsequent lessons cover how to map current and future states; how to create action plans for implementation and follow-through; and how to develop a storyboard that communicates the entire process. Finally, a computer-generated "virtual factory" shows how the system comes together and how lean actually works. You will see value stream management in action at four major companies. The package includes a facilitator's guide that provides information on how to use the package and an overview of each training module, and a participant guide.

AAP Prose Award Finalist 2018/19 Management of Animal Care and Use Programs in Research, Education, and Testing Second Edition is the extensively expanded revision of the

popular *Management of Laboratory Animal Care and Use Programs* book published earlier this century. Following in the footsteps of the first edition, this revision serves as a line management resource, providing for strong advocacy in advancing quality animal welfare and science worldwide, and continues as a valuable seminal reference for those engaged in all types of programs involving animal care and use. This new edition has more than doubled the number of chapters from the original volume to present a more comprehensive overview of the current breadth and depth of the field with applications to an international audience. Readers are provided with the latest information and resource and reference material from authors who are noted experts in their field. The book:

- Emphasizes the importance of developing a collaborative culture of care within an animal care and use program and provides information about how behavioral management through animal training can play an integral role in a veterinary health program
- Provides a new section on Environment and Housing, containing chapters that focus on management considerations of housing and enrichment delineated by species
- Expands coverage of regulatory oversight and compliance, assessment, and assurance issues and processes, including a greater discussion of globalization and harmonizing cultural and regulatory issues
- Includes more in-depth treatment throughout the book of critical areas in program management, physical plant, animal health, and husbandry. Biomedical research using animals requires

administrators and managers who are knowledgeable and highly skilled. This book constitutes the proceedings of the 4th Enterprise Engineering Working Conference (EEWC), held in Funchal, Madeira Island, Portugal, during May 5-8, 2014. EEWC aims at addressing the challenges that modern and complex enterprises are facing in a rapidly changing world. The participants of the working conference share a belief that dealing with these challenges requires rigorous and scientific solutions, focusing on the design and engineering of enterprises. The goal of EEWC is to stimulate interaction between the different stakeholders, scientists, as well as practitioners, interested in making enterprise engineering a reality. The 13 papers presented were carefully reviewed and selected for inclusion in the book. EEWC 2014 had 42 submissions and accepted 13 for publication. The topics presented in the papers allowed for active participation in interesting discussions and exchange of ideas and stimulated future cooperation among the participants. This made EEWC a real "working conference" contributing to the further development of enterprise engineering as a mature discipline.

Topics covered include: enterprise engineering in general DEMO methodology, the REA ontology, financial applications, business processes management and enter simulation.
