The Road to After Apr 19 2020 This poignant debut novel in verse is a portrait of healing, as a young girl rediscovers life and the soothing power of nature after being freed from her abusive father. For most of her life, Lacey has been a prisoner without even realizing it. Her dad rarely let her, her little sister, or her mama out of his sight. But their situation changes suddenly and dramatically the day her grandparents arrive to help them leave. It's the beginning of a different kind of life for Lacey, and at first she has a hard time letting go of her dad's rules. Gradually though, his hold on her lessens, and her days become filled with choices she's never had before. Now Lacey can take pleasure in sketching the world as she sees it in her nature journal. And as she spends more time outside making things grow and creating good memories with family and friends, she feels her world opening up and blossoming into something new and exciting.

Robotics, Vision and Control Mar 19 2020 The author has maintained two open-source MATLAB Toolboxes for more than 10 years: one for robotics and one for vision. The key strength of the Toolboxes provide a set of tools that allow the user to work with real problems, not trivial examples. For the student the book makes the algorithms accessible, the Toolbox code can be read to gain understanding, and the examples illustrate how it can be used —instant

gratification in just a couple of lines of MATLAB code. The code can also be the starting point for new work, for researchers or students, by writing programs based on Toolbox functions, or modifying the Toolbox code itself. The purpose of this book is to expand on the tutorial material provided with the toolboxes, add many more examples, and to weave this into a narrative that covers robotics and computer vision separately and together. The author shows how complex problems can be decomposed and solved using just a few simple lines of code, and hopefully to inspire up and coming researchers. The topics covered are guided by the real problems observed over many years as a practitioner of both robotics and computer vision. It is written in a light but informative style, it is easy to read and absorb, and includes a lot of Matlab examples and figures. The book is a real walk through the fundamentals of robot kinematics, dynamics and joint level control, then camera models, image processing, feature extraction and epipolar geometry, and bring it all together in a visual servo system. Additional material is provided at <http://www.petercorke.com/RVC>
