Handbook of

Wood Chemistry

and Wood

Composites Jun 21

2020 The
degradable nature
of high-
performance, wood-
based materials is
an attractive
advantage when
considering
environmental
factors such as
sustainability,
recycling, and
energy/resource
conservation. The
Handbook of Wood
Chemistry and
Wood Composites
provides an
excellent guide to
the latest concepts
and technologies in
wood chemistry and
bio-based
composites. The
book analyzes the
chemical
composition and
physical properties
of wood cellulose
and its response to
natural processes of
degradation. It
describes safe and
effective chemical

modifications to strengthen wood against biological, chemical, and mechanical degradation without using toxic, leachable, or corrosive chemicals. Expert researchers provide insightful analyses of the types of chemical modifications applied to polymer cell walls in wood, emphasizing the mechanisms of reaction involved and resulting changes in performance properties. These include modifications that increase water repellency, fire retardancy, and resistance to ultraviolet light, heat, moisture, mold, and other biological

organisms. The text also explores modifications that increase mechanical strength, such as lumen fill, monomer polymer penetration, and plasticization. The Handbook of Wood Chemistry and Wood Composites concludes with the latest applications, such as adhesives, geotextiles, and sorbents, and future trends in the use of wood-based composites in terms of sustainable agriculture, biodegradability and recycling, and economics. Incorporating over 30 years of teaching experience, the esteemed editor of this handbook is well-attuned to educational

demands as well as industry standards and research trends.
